

Phase II Final Presentation

THEIA

By: Nicole Fuller, Emily Porter, Noah Schmalenberger, Joshua Allard, Lance Tieng, Alena Watts

Scenario 1: Navigation

To-Be

- The THEIA app asks Stevie to give his current location and the destination.
- The app calculates the route from the current location to the destination.
- THEIA tells Stevie to "Walk ahead 10 steps, then turn left"

Prototype

- User can select a starting room and a destination room from the map and the app will show the best course as well as give vocal instructions

Scenario 3: Configuration

To-Be

- THEIA can be configured to fit Stevie's needs.
- THEIA includes multiple settings for customization.
- Stevie can navigate successfully to his next classroom with additional saved configurations.

Prototype

- User can change the name listed for the user.
- User may configure emergency contacts.
- User may add or remove any emergency contacts.
- Users setting configurations will be saved and maintained until changed.

Scenario 4: Emergency Assistance

To-Be

- THEIA uses the phone's sensors to detect any fall.
- When Stevie falls, THEIA tells Stevie "It seems like you've fallen. Are you okay?"
- If there is no response within 15 seconds, THEIA automatically sends an alert about the fall along with his location to the designated caretaker.

Prototype

- Any page or backend service can route to this page to initiate the emergency assistance feature.
- User has 15 seconds to indicate that there is no emergency
- After 15 seconds, the app will attempt to contact each emergency contact in order of how they are in settings
- After no emergency contact picks up, emergency services is contacted

THANK YOU
